ABOUT US

Originated in the year 2012, we, Eindha Granite Pvt Ltd, have won the most reputed position in the market as an ISO 9001:2008 manufacturer, importer & exporter. We deal in a premium range of Granite Stones, Granite Tiles, Granite Floor Tiles, Granite Slabs, Copper Silk Granite, Copper Silk Granite Stone, Copper Silk Granite Slabs, Granite Kitchen Tops, Granite Monuments Slabs, Cobbles, etc.. Our product is processed under extreme pressure and considered among the hardest and most dense type of stone. We make it available in various colors and dimensions suiting to the construction needs of both residential and commercial sectors. The assortment is highly durable, stain resistant and available in smooth and rough finish. Granite Tiles has non slippery texture, which adds to its value in the market.

Our Infrastructure

We are backed with sophisticated infrastructure which is fitted with latest cutting, mining and other facilities. It is spread over a large area of land and installed with cutting edge technology. Here, we are able to process Indian Granite and Copper Silk Granite in wide quantity. The reliable and competent team of professionals works with us for our growth and success. They manages our activity with utmost perfection leaving no scope for complains from the customers.

Why Us?

Competitive-pricing policy

Customers interest above our own

Custom-made range

Effective cost management

Ethical practices & transparency in all our dealings

Experienced team members

High-grade of products

Widespread network

Our company is located in the industrial area of Jalore (Rajasthan). We have witnessed the eminent success in this competitive market under the able guidance of our honorable mentor, Mr. Mukesh Eindha, the experienced Director of the enterprise. He has guided us so well that today we are successfully satisfying the needs of every sector and industries independently and with due perfection. Further, we have constructed a modern infrastructure which is spread over a large area. The unit is equipped with latest machines and tools helping us in meeting specific demand of the clients on time. We Export our Products to France, Germany, Greece, Hungary, Ireland, Italy, Poland, Portugal, Spain, Sweden, United Kingdom, Austria, Belgium, Bulgaria, Denmark, Finland and other European Countries.

India has the widest range of natural stone deposits and resources. India possessess the most exotic colours and shades of granite, which are not found in other parts of the world. Granite is well known as one of the most beautiful and reliable materials for the building industry and it has been used throughout millennia by ancient and modern architects alike. This is because granite is the most long lasting and durable stone known to man. It is not worn down by various environmental chemicals or weather wear down. Hence, in addition to the beauty of the stone itself, it is for this reason still that granites remains as one of the few building materials in history that has lasted throughout time.

INTRODUCTION TO GRANITES

ABOUT US

We initiated our operation in granite as a manufacturer of granite slabs & tiles at a modern and well equipped plant in orissa. With our dedicaton and with a team of top quality technicians aided by a skilled work force, we earned a reputation for itself as a trusted suppliers. We slowly integrated backward and now have our own quarries.

As our range of customers and network grew, we diversified forward in granite trading and started retail/wholesale showrooms at Bangalore, Mysore, Raipur & Guwahati. Vedant Granite provides full range of high quality granite to suit your requirement and taste. The company provides the products and services directly from its factory.

Myths About GRANITE

Granite is absorbent. Granite qualifies as impervious to water and is actually less absorbent than some solid surface (plastic) products. Granite is commonly used as building material for high-rise buildings due to its ability to withstand gale force winds and rain.

Granite stains easily. Granite is resistant to stains, Generally, any liquid spilled on a granite top, if wiped up within a few minutes, will not stain. However, even water can soak into a granite countertop and leave a dark colored spot but this will evaporate in minutes. Liquids that do not evaporate, such as oils will cause stains if left to soak into the stone.

Stains in granite are permanent. Most stains can be removed. Even oil stain can usually be removed using a poultice or paste that will draw out the oil from the stone. Granite will lose its polish over the years. While this may be true of marble, granite will shine years from now just as if it was brand new. Granite is highly scratch resistant and will not show wear from daily use.

Granite requires a lot of maintenance. Routine cleaning with mild soap and water is all that is generally required. Once a year, are-application of a penetrating sealer should be performed, which only takes about 15 minutes, less time than scouring a solid surface countertop with a cleanser to remove scratches.

Heat will cause granite to chip and crack. Granite is heat resistant and can withstand the heat of hot pots and pans without damage.

Impact from a heavy object may chip granite but heat from anything short of a blowtorch will not affect your countertop.

Dark colored granites are harder than light colored graitres. Granites are composed of a variety of minerals, each of which has specific performance properties. The hardest mineral commonly found in granite is quartz, which is normally a somewhat translucent, white to grey colored mineral.

Granite and marble are essentially the same. Besides the fact that they are both natural stones and can be polished, they are otherwise very different. Marble is generally a calcious stone, formed from oceanic deposits and then compressed under pressure (metamorphosed). Granite, however, is an igneous rock, essentially molten magma, which is cooled and then hardened below the earth's surface.

FLOORING AND WALL SURFACES

With the functionality of Granite flooring and cladding possibilities any space or layout can be created from traditional and classical designs to spaces with a modern and straightforward feel, The range of shades and cladding systems can provide spaces with style and structure. A canopy under which everything fits.

KITCHENS

Colours and shapes which are changing the concept of the kitchen. The latest innovative technologies are included in the production process in order to obtain sophisticated and high-quality finishes with a magnificent consistency in a wide range of shades, which can make your kitchen livelier and unique in every sense.

BATHROOM

The same concept can be applied to bathrooms and toilet with shower cubicles and trays, bathtubs, tiles and cutto size Granite Slabs. The differing shades and colour sensation are attractive options of design and functionality and are adaptable to any architectural project.
